* New Connection report is based on number of applications received of individual building wherein multiple meters are connected.

** Faulty meter includes- Defect in the meters not affecting the customer's supply, however affecting recording of consumer's consumption and needs immediate replacement.

This does not include black spot meters, meters used for reconnection of supply, meter replaced on consumer request, stolen or missing meters.

Notes:

Sr.no	Reasons for delay	6.1 Fuse off call	6.3 UG Cable fault
1	In theft prone areas miscreants are tapping wires from Rlnfra's feeder boxes and meter cabins. The overloading due to such unauthorized load results in to interruption of supply. Rlnfra is taking efforts to remove such unauthorized connections from time to time. During any interruption, for safety purpose, Rlnfra needs to first remove such unauthorized connections and then restore the supply. This results in delay in restoration of supply to complainant or even delay repairing of fault. Events related to this reason are specified here.	61	569
2	Heavy Rains, Water Logging, water ingress due to side by Nalla: In such conditions it becomes difficult to access installation/cables. In such cases it take more time to attended compliant/fault.	114	159
3	Request from Consumer to attend the fault at later suitable time	1	98
4	Objection from Consumer: Some time consumers in the area take objection (specially in slums) for excavation or laying of temporary cable or wire. At times it becomes very difficult to convince public requiring take longer time. Such events are covered here.		20
5	Adverse site conditions (cable deep/multiple cables at one location/road crossing/supply restoration not possible by temporary means/mass objection): Rlnfra's network is developed over 7 decades. Due to road widening, level raising, concerting, etc. cables have gone deep under the roads. It takes time to get all necessary permission and excavation for repair of such faults. Since using temporary cable or wire on such public roads is safety hazard, it is preferred to repair the fault. Mass objections on site is also faced sometimes. Availability of multiple Utilities under ground and makes it difficult to trace/locate the fault. In such cases supply restoration is delayed.	105	358
6	Multiple services tapped from common point/main network: It was old practice to tap services from common point. If any service cable becomes faulty, for isolation, it takes more time as all services need to be removed, diverted and then take-up the work on faulty service. In such cases it requires more time as number of works involved are multiple		3
7	Multiple Faults: In some cases multiple faults get developed due to damages by external agency (e.g. road widening/concreting contractors). After repair of one fault, on testing other fault is noticed. Restoration is not possible unless all the faults are repaired.		6
8	Access issue to meter cabin /Rlnfra network equipment: Many times it is found that the access to Rlnfra feeder pillars / meter cabin is blocked due to car or motor cycle parking or by any other means. This requires first removal of such obstructions to get access. It take linger time to search owner or call traffic police to get the site cleared. Once the access is available, repairing work is initiated. However, this delays the supply restoration.		11
9	Fault at Consumer installation, which consumer needs to rectify. Supply is kept OFF for safety purpose.	1	8
